Assessment Brief

F107 Foundations of Computer Science

Assessment Summary

Title:	Written Exam
Weighting:	70% Primary Task + 15% Online Assessments + 15% Class Participation
Deadline:	Please check the assessment timetable here for updated information.
Submission Method and Length:	If the exam is written, you should write your answers on paper and return them to the exam proctor. If the exam is online, submit your answers via Canvas. Please refer to the below exam guidelines for more details. Note that you do not need to sign and attach the Assessed Submission Form. Instead, you must read and accept the Declaration of Authorship provided in the submission folder on Canvas.

Exam Guidelines

Before the Exam Starts

- This is a face-to-face hybrid exam. You must be present on campus unless you are outside Germany, in which case online attendance is permitted.
- Be prepared before starting as you will not be allowed to leave until the exam is completed.
- Have a valid ID card with you as you will need to show it to the proctoring colleague or tool before the exam begins.
- On-campus students must arrive at least 30 minutes early for setup and identity verification. Online students must log in at least 10 minutes early to set up the proctoring tool in advance.
- Online students must be alone in a quiet room during the exam.

During the Exam

- Once the exam period begins, on-campus students receive physical exam sheets. Online students can find the exam questions on Canvas under the Assignments/Quizzes menu. Online students must write the answers for each question directly in the same Canvas form.
- The exam is restricted open book, meaning you may bring up to three two-sided, self-written, non-copied DIN A4 papers of notes (in total six pages) and a non-programmable calculator. Algebraic or graphical calculators are not allowed. A scientific calculator is recommended. No additional resources are permitted beyond these items.
- The proctoring tool is configured to treat any action other than looking at the screen, thinking, or writing your answers as potential academic misconduct. Therefore, you must not engage in any of the following activities¹:
 - Do not stop your internet connection, screen sharing, camera recording, or the proctoring tool.
 - Do not look away from the screen.
 - Do not leave the room.
 - Do not allow anyone else in the room.

- Do not talk to anyone or chatbot.
- Do not chat with any person or chatbot.
- Do not open additional browser tabs or other software.
- Do not copy or paste any content.
- Do not use any electronic devices, including mobile phones, earbuds, or headsets.
- Do not use any resources, such as personal notes, lecture slides, previous assignments, or textbooks.
- Do not share or exchange any materials, such as notes, formula sheets, or calculators.
- Position your camera so that your face, hands, and the table are clearly visible during the exam, as illustrated in the picture below.

- Solutions must be correct, complete, concise, clearly written, easy to follow, and expressed in your own words.
- Some problems may require creativity. Clearly state any assumptions you make and solve the problems accordingly.
- Manage your time carefully and ensure that you submit your work before the deadline.

Once You Are Done

- Once you have completed the exam, submit your answers as follows:
 - If you are on campus, return your written question and answer sheets to the exam proctor.
 - If you are online, submit your answers on Canvas. You are also encouraged to upload your handwritten notes as a scanned document on Canvas within 10 minutes after submitting your exam. Double-check the Canvas page to ensure that your answers have been successfully submitted before the deadline.

¹Any violation of these rules will result in an investigation for academic misconduct.

Additional Components:	At Gisma University of Applied Sciences, in-class participation and engagement with asynchronous content contribute 30% of the total module grade. Students who actively participate in their scheduled synchronous classes, according to their designated mode of delivery, will earn up to 15% of their final module mark. The awarded percentage is proportional to their participation rate. Note that active participation requires meaningful engagement during class, including contributions to discussions and involvement in learning activities. Students who successfully engage with asynchronous materials and complete all required summative assessments will earn an additional 15% of their final module mark. Asynchronous tasks must be completed by the specific deadlines set by the tutors. All assigned tasks must be submitted by the final deadline associated with the principal assessment. Students who do not actively participate in synchronous sessions will still be allowed to submit their assessments. However, their final module mark will be reduced by up to 15%. Likewise, failing to engage with asynchronous materials and complete the required short summative assessments will result in a deduction of up to 15% from the final module mark.
